DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

Claims 2,3 and 13 are objected to because of the following informalities: applicant is inconsistent with the claimed limitation "variable voltage amount" by referring to the limitation as "amount". Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 5-7.

Applicant implies a difference between "analog duration" and "duration control" as being separate elements, but only recites "a generator of an analog duration control voltage" thereby rendering the claims unclear and inconsistent. It is unclear as to the interconnections of the comparators with each other and the timing control logic thereby rendering the claims unclear.

Regarding claims 8-10.

Applicant implies a difference between "analog temporal placement" and "temporal placement control" as being separate elements, but only recites "an analog temporal placement control voltage" thereby rendering the claims unclear and inconsistent. It is unclear as to the interconnections of the comparators with each other and the timing control logic thereby rendering the claims unclear.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 12-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Rilum et al (PN 5,608,712).

Figure 3 discloses an apparatus having an arrangement of optics coupled to a pulse generating system composed of a machine controller having elements (2,40) where the machine controller asymmetrically altered the pulse by use of a variable voltage ramp function as the ramp function is determined in accordance to the write head, as described in column 11 lines 24-65. Column 8 lines 39-51 discloses the machine controller having within a micro controller for controlling the duty cycle of the ramp and a digital-to-analog converter.

Allowable Subject Matter

Claim 11 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior arts alone or in combination discloses the structural combination of dependent claim 11 along with all of the limitations of the base claim and any intervening claims, in particular having the cited interconnections between the analog duration comparator, an analog temporal placement comparator and the state device.
